Work Experience

Co - Founder　　　　　　　　　　**InvoEzz.com**　　　　　　　　**March 2025 - present**
Self-employed　　　　　　　　　　　Jakarta, Indonesia

InvoEzz.com is an innovative online invoicing platform designed to streamline and enhance the invoicing process for businesses. It features AI-powered cover letter generation using DeepSeek v3, enabling users to create professional, personalized cover letters effortlessly. The platform is currently available for free, with ongoing development to expand its features.

- Developed InvoEzz.com, an online invoicing platform featuring AI-powered cover letter generation using DeepSeek v3, from the ground up as part of a 3-person team.
- Implemented Next.js Server Actions to streamline data processing and form handling, resulting in a more efficient and maintainable codebase.
- Integrated AI capabilities (OpenAI API, Gemini API) for efficient cover letter creation.
- Utilized PrismaORM for database management and Tailwind CSS & HeroUI for responsive design.
- Launched in March 2025, the platform is actively being refined and expanded with new functionalities.

IT Staff (Wordpress)　　　　　　**PT Andiarta Wisata**　　　　**January 2025 - Present**
Full time　　　　　　　　　　　　　Jakarta, Indonesia

- Manage company websites using WordPress. Updated content regularly, optimized page layouts, and customized the design of landing pages to enhance user experience and engagement.

Portofolio

Front End Development　　　　　　**SIMS-PPOB**　　　　　　　　　　**May 2025**
Self project　　　　　　　　　　　　Jakarta, Indonesia

- Designed and developed a comprehensive PPOB (Payment Point Online Bank) management system, simulating product and transaction features.
- Built the application using React, Redux Toolkit, and TypeScript for robust state management and type safety, showcasing modern front-end development practices.
- Seamlessly integrated with external RESTful APIs for efficient data fetching and submission, simulating real-world data interactions.
- Implemented responsive UI design using Tailwind CSS and focused on clean, maintainable code.

Full Stack Development   **Sales Dashboard App**   **April 2025**

Self project   Jakarta, Indonesia

Developed a full stack dashboard app using Next.js (frontend) and FastAPI (backend) to visualize sales representative data with AI powered assistant in a clean, responsive UI.

- Integrated AI assistant using OpenRouter.ai (Mistral 3.1 24B) to answer questions about the data.
- Implemented detailed modal views with Hero UI, and managed state using React hooks.
- Built REST API with FastAPI serving data from dummyData.json, including error and loading state handling.
- Combined strong UI/UX, backend logic, and AI to simulate a real-world data-driven app.
- Deployed frontend on **Vercel** and backend on **Railway.**
